

TRAILER TENT CABIN ERECTING INSTRUCTIONS - 2001 CABANON VOYAGER

Voyager

The following instructions are intended as a step-by-step guide to help you erect your Conway unit. Please read your owners manual thoroughly where you will find other helpful information within the section on pitching.

1. Position trailer on as level ground as possible. Drop down the four corner steadies and adjust as necessary. Use the four plywood pads supplied.

2. After unclipping and removing the cover, swing out the frame and canvas and join the centre poles. Extend the poles to centre one of five holes, then lift/swing over the bed boards and adjust the bed legs to level them.

NOTE: In dry weather conditions continue, if wet go to 5, then 3,4.

3. Pull out bed extensions on both beds.

4. Fit inner tent over mattresses.

TRAILER TENT CABIN ERECTING INSTRUCTIONS - 2001 CABANON VOYAGER CONTINUED

5. Pull canvas over frame and ensure the canvas is sitting evenly on the roof rubbing strips. Close all zips and peg out, securing the corners first and then the intermediate rubbers.

7. Lift the spring linked front frame and starting with the centre poles, connect to the adjustable roof poles. Level the height of the frame by using the adjustable feet.

6. Hook the three adjustable roof poles into the holes provided in the cabin frame.

8. Caretfully pull the canvas over the frame, taking care that you do not pull or snag the curtain ties/plastic windows. Fit the short stub canopy poles, then go inside and tension the canvas by extending the adjustable roof poles.
When folding, reverse the procedure for both extension and cabin. Ensure canvas is not trapped within the frame. Always unzip the awning from the cabin before folding up.

SPECIAL NOTE: When pegging out ensure that the frame is adjusted to keep the canvas as taut as possible. When new, adjustments should be at maximum wherever ground conditions allow.

INNER TENTS: New units - to avoid soiling during packing and transport, the inner tents are packed separately. Once fitted, they should remain in place.

For further tips and do's and don't's when using your trailer tent, see your Owners Handbook.

BE PREPARED: Always guy out your canvas for added stability.

ROOF LININGS: When fitted, ensure all metal clips have the curved edge facing down to avoid chafing the canvas.

SUN CANOPY (OPTIONAL) AND SIDE WALLS (OPTIONAL) - TRAILER TENTS

DELUXE TYPE

Canvas roof with peggable corner "legs". Zips to cabin or ties to extension frame front.

Frame:- "Gable-end" type front frame with 1 centre and 2 side roof poles. Optional side walls can be fitted to this type.

STANDARD TYPE

Canvas roof section only. Ties to front of extension frame only. (side walls n/a).

Frame "Gable-end" type front frame with 1 centre hook-on pole only.

ERECTION SEQUENCES

e.g. Mirage deluxe type. (see also frame drawing)

- 1 Release tension on extension roof poles and remove 3 spiked peak canopy poles (No's 9). Replace these with sun canopy poles (No's 9) (spiked) and 8 (adjustable). Place sun canopy canvas on these poles and attach under the peak canopy to the front of the extension frame, using the sewn in tie tapes (3).

- 2 Fit the side roof poles through the sleeves in the sun canopy roof canvas and ensure spikes are through both sets of eyelets in canvas. Certain models may have Velcro on sleeves.

- 3 Fit 2 halves of spring linked front frame through front sleeves in sun canopy canvas and ensure spikes are through both sets of eyelets in canvas.

- 4 Re-tension extension roof poles then tension sun canopy frame roof poles. Using the pegs and guy lines provided, peg down the canvas legs and guy out the front. It is recommended that guy lines be used on all occasions.

Note: When fitting sun canopy to cabin unit alone use hooked poles (No's 10) in place of No's 9, with the short hook in the centre and long hooks at the sides, hooking into the cabin frame. The sun canopy canvas will then zip to the cabin canvas.

STANDARD TYPES

The single centre roof pole will simply hook below the peak canopy, onto the extension frame front, through the hole in the canvas front wall, adjacent to the extension frame centre leg.

Frame Drawings:

- 1 Voyager (std)
- 2 Continental (std)
- 3 Classic Trio, Vision, Spirit. (see also page 80)
- 4 Century & Mirage deluxe
- 5 Classic (std)

Sun canopy side walls-fitting:

- 1 Note that the side wall fits to either end, "inside" of the sun canopy with mudwall "inside" also.
- 2 Clip the 3 x metal clips (top) to the side roof poles of the sun canopy frame and adjust position if necessary to tie the end tie tapes.
- 3 Clip the outer metal clips only to the sun canopy frame leg and peg down using the pegs provided.

Note: Marechal and Cabanon poles are not interchangeable.
